Manage Up Your Cybermaturity

WITH THE NEW CMMI CYBERMATURITY PLATFORM

Building board confidence in your cybersecurity programs gets more challenging as threats and security requirements continue to evolve. That's why we created the first cybersecurity maturity management platform to arm you with the evidence-based insights you need to improve cyber resilience—and confidence—across your enterprise.

Manage Up
to Your Board with Clear, Reliable Metrics

Quickly create board-ready packets featuring business-focused language that help you explain the status of, set goals for, and make evidence-based investment decisions related to your cyber programs. These are updated as you complete your roadmap, giving your board continual visualization of your progress.

Visuals offer pragmatic insights that align to the strategic objectives of your cybersecurity operations.

Manage Up
Your Resilience by Focusing on Your Risks

The cloud-hosted CMMI Cybermaturity Platform redefines what it means to be a cybersecurity standard, providing:

- **A customizable, enterprise-level solution** that can be administered in-house and tailored to the unique needs of your business.

- **A risk-focused capability self-assessment** that targets the areas most relevant to your enterprise.

- **A risk-prioritized roadmap** that helps you focus cyber investments on the threats that will have the greatest impact.

- **Assessment findings that align with global, recognized standards,** including COBIT 5, ISO027001, NIST (CSF, 800-53, 800-171, 800-30), DHS C2M2 and CIS.

Manage Up to Greater Confidence, Today and Tomorrow

The CMMI Cybermaturity Platform provides an evidence-based approach for assessing, optimizing and reporting on your cyber capabilities, letting you:

- **Build board confidence** by framing cyber risks in a business context.

- **Focus your efforts** and investments in the areas that matter most.

- **Stay ahead** of the latest threats, best practices and technologies.

Put the Proven CMMI Methodology to Work for Your Business

① **TAILOR THE PLATFORM TO GAIN THE INSIGHTS YOU NEED**

With the CMMI Cybermaturity Platform, you define the scope of implementation across your enterprise. Whether you need to assess multiple departments or multiple sites around the world, the solution lets you monitor and manage cyber maturity, drive progress and ensure framework alignment where it matters most.
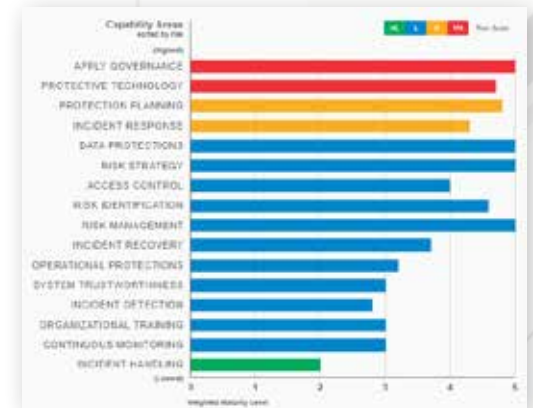

② **COMPLETE YOUR RISK PROFILE TO DEFINE MATURITY TARGETS**

You indicate how likely specific risk events are to occur—and how severe the impact of that occurrence would be—in your organization. The platform then uses that evidence to determine which capabilities are most important and how mature those capabilities need to be.

RISK PROFILE

Identify the likelihood of risk events in your organization and manage results.

MATURITY TARGETS

Each capability area is assigned a maturity target, then prioritized based on highest risk.

3

ASSESS CYBERMATURITY ACROSS YOUR ORGANIZATION

Your team completes an activity-based self-assessment to measure current levels of cybermaturity for people, processes and technology throughout your organization.

ACTIVITY-BASED MATURITY ASSESSMENT

Measure your maturity against 1,800 practice statements across seven key functional areas.

MEASURED MATURITY VS. TARGET MATURITY

Compare your measured maturity against your risk-based maturity targets for all capability areas.

4

GENERATE YOUR RISK-BASED ROADMAP

The CMMI Cybermaturity Platform compares your risk-based targets against your current capabilities to identify and prioritize maturity gaps. This risk-based Roadmap provides the evidence you need to plan, manage and support cyber investments.

ROADMAP

Prioritize your cybersecurity investments based upon impact and risk.
